Pay attention to the installation orientation. Otherwise, a black screen will occur.

1. Unscrew the screws on the back cover of the screen and unplug the fan, remove the first board behind the screen to see the motherboard, untie the two wires and the backlight socket line and antenna and remove the motherboard to see the back of the screen bracket.
2. Remove the two screws of the wires and switch the accessories board to dock the screen wires and touch wires and use the front to remove the screen wires screws with the switching board together with the screws to fix.
3. installed switchboard effect see, pay attention to the line can not be inserted crooked inserted oblique, otherwise it is easy to cause damage to the original car motherboard, docking accessories line LVDS line, pay attention to the location of the line. Correspondingly fixed low touch line below the bracket 2MM, easy to transfer to the switchboard by the motherboard after the pressure dead line.
4. Restore the original motherboard, play the center screws, and the 60P and 12P wires back to the corresponding original seat, backlight seat is also restored to plug back.
5. The last first board also restore and lock the screws, the back shell before restoring the fan socket to plug.

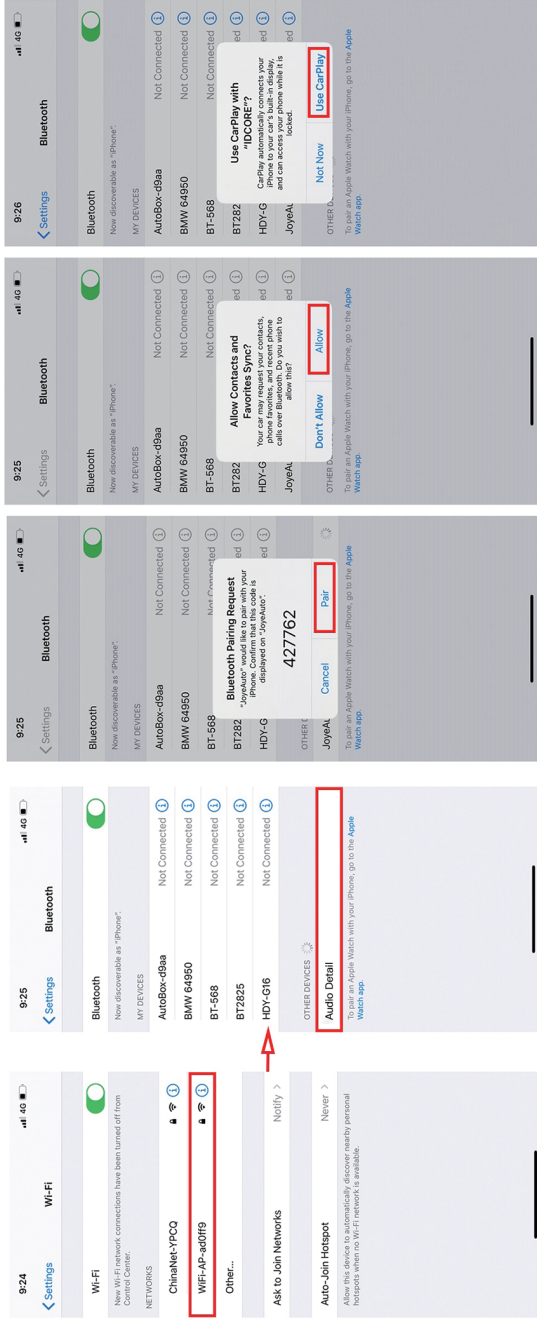

How to Connect Wireless Apple CarPlay

1, Long press switch button (different car with different switch button, check from installation diagram) to enter system main menu as below (BMW for example):

2, Then turn ON Wi-Fi from iPhone's settings, you will find option of "WiFi-AP-****", but DO NOT need connect it, and DON'T connect any other network.

Turn ON Bluetooth, find and click "Audio Detail", then according below steps get wireless connection (Note: If "Audio Detail" shows connected, but didn't go to CarPlay, then click Setup -> Bluetooth -> Paired device -> WiFi CarPlay then iPhone will show Use CarPlay request)

3, After 5 sec, it will enter CarPlay screen automatically, then enjoying...
